

# Package com.wlt.wla

## Class Summary

[MvcConfiguration](#)

[WebMvcConfig](#)

[WebSecurityConfig](#)

[WlaApplication](#)

[WlaController](#)

---

com.wlt.wla

## Class MvcConfiguration

```
java.lang.Object
|
+--org.springframework.web.servlet.config.annotation.WebMvcConfigurerAdapter
|
+--com.wlt.wla.MvcConfiguration
```

### All Implemented Interfaces:

org.springframework.web.servlet.config.annotation.WebMvcConfigurer

---

< [Constructors](#) > < [Methods](#) >

---

```
public class MvcConfiguration
extends org.springframework.web.servlet.config.annotation.WebMvcConfigurerAdapter
```

## Constructors

### MvcConfiguration

```
public MvcConfiguration()
```

## Methods

## addResourceHandlers

```
public void  
addResourceHandlers(org.springframework.web.servlet.config.annotation.ResourceHandler  
registry)
```

### Overrides:

addResourceHandlers in class  
org.springframework.web.servlet.config.annotation.WebMvcConfigurerAdapter

---

com.wlt.wla

## Class WebMvcConfig

```
java.lang.Object  
|  
+--com.wlt.wla.WebMvcConfig
```

---

< [Constructors](#) > < [Methods](#) >

---

```
public class WebMvcConfig  
extends java.lang.Object
```

## Constructors

### WebMvcConfig

```
public WebMvcConfig()
```

## Methods

### getDataSource

```
public org.springframework.jdbc.datasource.DriverManagerDataSource  
getDataSource()
```

### getWishListDao

```
public WishListDao getWishListDao()
```

---

## viewResolver

```
public org.springframework.web.servlet.view.InternalResourceViewResolver
viewResolver()
```

---

com.wlt.wla

## Class WebSecurityConfig

```
java.lang.Object
|
|--org.springframework.security.config.annotation.web.configuration.WebSecurity
|
|--com.wlt.wla.WebSecurityConfig
```

### All Implemented Interfaces:

```
org.springframework.security.config.annotation.web.WebSecurityConfigurer
```

---

< [Constructors](#) > < [Methods](#) >

---

```
public class WebSecurityConfig
extends org.springframework.security.config.annotation.web.configuration.WebSecurityConfigurerAdapter
```

## Constructors

### WebSecurityConfig

```
public WebSecurityConfig()
```

## Methods

### bCryptPasswordEncoder

```
public org.springframework.security.crypto.bcrypt.BCryptPasswordEncoder
bCryptPasswordEncoder()
```

### configureGlobal

```
public void
configureGlobal(org.springframework.security.config.annotation.authentication.builders.AuthenticationManagerBuilder
auth)
```

## customAuthenticationManager

```
public org.springframework.security.authentication.AuthenticationManager  
customAuthenticationManager()
```

---

## roleVoter

```
public org.springframework.security.access.vote.RoleVoter roleVoter()
```

---

com.wlt.wla

## Class WlaApplication

```
java.lang.Object  
|  
+--com.wlt.wla.WlaApplication
```

---

< [Constructors](#) > < [Methods](#) >

---

```
public class WlaApplication  
extends java.lang.Object
```

## Constructors

### WlaApplication

```
public WlaApplication()
```

## Methods

### main

```
public static void main(java.lang.String[] args)
```

---

com.wlt.wla

# Class WlaController

```
java.lang.Object
|
+--com.wlt.wla.WlaController
```

---

< [Constructors](#) >

---

```
public class WlaController
extends java.lang.Object
```

## Constructors

### WlaController

```
public WlaController()
```

# Package com.wlt.wla.auth.model

## Class Summary

[Balance](#)

[DBWishItems](#)

[Role](#)

[Settings](#)

[User](#)

---

com.wlt.wla.auth.model

## Class Balance

```
java.lang.Object
|
+--com.wlt.wla.auth.model.Balance
```

---

< [Constructors](#) > < [Methods](#) >

---

```
public class Balance
extends java.lang.Object
```

## Constructors

### Balance

```
public Balance()
```

## Methods

### getBalanceChange

```
public float getBalanceChange()
```

---

## getBalanceChangeStr

```
public java.lang.String getBalanceChangeStr()
```

---

## getCurrency

```
public java.lang.String getCurrency()
```

---

## getIsUpdating

```
public java.lang.String getIsUpdating()
```

---

## getNote

```
public java.lang.String getNote()
```

---

## getTimestamp

```
public java.lang.String getTimestamp()
```

---

## getUpdateChoice

```
public java.lang.String getUpdateChoice()
```

---

## setBalanceChange

```
public void setBalanceChange(float balanceChange)
```

---

## setBalanceChangeStr

```
public void setBalanceChangeStr(java.lang.String balanceChangeStr)
```

## setCurrency

```
public void setCurrency(java.lang.String currency)
```

---

## setIsUpdating

```
public void setIsUpdating(java.lang.String isUpdating)
```

---

## setNote

```
public void setNote(java.lang.String note)
```

---

## setTimestamp

```
public void setTimestamp(java.lang.String timestamp)
```

---

## setUpdateChoice

```
public void setUpdateChoice(java.lang.String updateChoice)
```

---

**com.wlt.wla.auth.model**

# Class DBWishItems

```
java.lang.Object
|
+--com.wlt.wla.auth.model.DBWishItems
```

---

< [Constructors](#) > < [Methods](#) >

---

```
public class DBWishItems
extends java.lang.Object
```

## Constructors

## DBWishItems

```
public DBWishItems()
```

---

## DBWishItems

```
public DBWishItems(java.lang.String name,  
                    int id,  
                    float price,  
                    int group,  
                    int priority,  
                    java.lang.String url)
```

## Methods

### getCat\_name

```
public java.lang.String getCat_name()
```

---

### getGroup

```
public int getGroup()
```

---

### getId

```
public int getId()
```

---

### getName

```
public java.lang.String getName()
```

---

### getPrice

```
public float getPrice()
```

## getPriceStr

```
public java.lang.String getPriceStr()
```

---

## getPriority

```
public int getPriority()
```

---

## getPriorityName

```
public java.lang.String getPriorityName()
```

---

## getPriority\_name

```
public java.lang.String getPriority_name()
```

---

## getUrl

```
public java.lang.String getUrl()
```

---

## getUrlImg

```
public java.lang.String getUrlImg()
```

---

## getUser\_id

```
public int getUser_id()
```

---

## setCat\_name

```
public void setCat_name(java.lang.String cat_name)
```

---

## setGroup

```
public void setGroup(int group)
```

---

## setId

```
public void setId(int id)
```

---

## setName

```
public void setName(java.lang.String name)
```

---

## setPrice

```
public void setPrice(float price)
```

---

## setPriceStr

```
public void setPriceStr(java.lang.String priceStr)
```

---

## setPriority

```
public void setPriority(int priority)
```

---

## setPriorityName

```
public void setPriorityName(java.lang.String priorityName)
```

## setPriority\_name

```
public void setPriority_name(java.lang.String priority_name)
```

---

## setUrl

```
public void setUrl(java.lang.String url)
```

---

## setUrlImg

```
public void setUrlImg(java.lang.String urlImg)
```

---

## setUser\_id

```
public void setUser_id(int user_id)
```

---

## toString

```
public java.lang.String toString()
```

### Overrides:

toString in class java.lang.Object

---

**com.wlt.wla.auth.model**

## Class Role

```
java.lang.Object
|
+--com.wlt.wla.auth.model.Role
```

---

< [Constructors](#) > < [Methods](#) >

---

```
public class Role
extends java.lang.Object
```

## Constructors

### Role

```
public Role()
```

## Methods

### getId

```
public java.lang.Long getId()
```

---

### getName

```
public java.lang.String getName()
```

---

### getUsers

```
public java.util.Set getUsers()
```

---

### setId

```
public void setId(java.lang.Long id)
```

---

### setName

```
public void setName(java.lang.String name)
```

---

### setUsers

```
public void setUsers(java.util.Set users)
```

---

com.wlt.wla.auth.model

# Class Settings

```
java.lang.Object
|
+--com.wlt.wla.auth.model.Settings
```

---

< [Constructors](#) > < [Methods](#) >

---

```
public class Settings
extends java.lang.Object
```

## Constructors

### Settings

```
public Settings()
```

## Methods

### getName

```
public java.lang.String getName()
```

---

### getValue

```
public java.lang.String getValue()
```

---

### setName

```
public void setName(java.lang.String name)
```

---

### setValue

```
public void setValue(java.lang.String value)
```

com.wlt.wla.auth.model

# Class User

```
java.lang.Object
|
+--com.wlt.wla.auth.model.User
```

---

< [Constructors](#) > < [Methods](#) >

---

```
public class User
extends java.lang.Object
```

## Constructors

### User

```
public User()
```

## Methods

### getId

```
public java.lang.Long getId()
```

---

### getPassword

```
public java.lang.String getPassword()
```

---

### getPasswordConfirm

```
public java.lang.String getPasswordConfirm()
```

---

## getRoles

```
public java.util.Set getRoles()
```

---

## getUsername

```
public java.lang.String getUsername()
```

---

## getuRoleId

```
public int getuRoleId()
```

---

## setId

```
public void setId(java.lang.Long id)
```

---

## setPassword

```
public void setPassword(java.lang.String password)
```

---

## setPasswordConfirm

```
public void setPasswordConfirm(java.lang.String passwordConfirm)
```

---

## setRoles

```
public void setRoles(java.util.Set roles)
```

---

## setUsername

```
public void setUsername(java.lang.String username)
```

## setuRoleId

```
public void setuRoleId(int uRoleId)
```

# Package com.wlt.wla.auth.repository

## Interface Summary

[RoleRepository](#)

[UserRepository](#)

---

com.wlt.wla.auth.repository

## Interface RoleRepository

All Implemented Interfaces:

org.springframework.data.jpa.repository.JpaRepository

---

public interface **RoleRepository**

implements org.springframework.data.jpa.repository.JpaRepository

---

com.wlt.wla.auth.repository

## Interface UserRepository

All Implemented Interfaces:

org.springframework.data.jpa.repository.JpaRepository

---

< [Methods](#) >

---

public interface **UserRepository**

implements org.springframework.data.jpa.repository.JpaRepository

## Methods

### findByUsername

public [User](#) **findByUsername**(java.lang.String username)

# Package com.wlt.wla.auth.service

## Interface Summary

[SecurityService](#)

[UserService](#)

## Class Summary

[SecurityServiceImpl](#)

[UserDetailsServiceImpl](#)

[UserServiceImpl](#)

---

com.wlt.wla.auth.service

## Interface SecurityService

---

< [Methods](#) >

---

public interface **SecurityService**

## Methods

### autoLogin

```
public void autoLogin(java.lang.String username,  
                      java.lang.String password)
```

### findLoggedInUsername

```
public java.lang.String findLoggedInUsername()
```

---

com.wlt.wla.auth.service

# Class SecurityServiceImpl

```
java.lang.Object
|
+--com.wlt.wla.auth.service.SecurityServiceImpl
```

All Implemented Interfaces:

[SecurityService](#)

---

< [Constructors](#) > < [Methods](#) >

---

```
public class SecurityServiceImpl
    extends java.lang.Object
    implements SecurityService
```

## Constructors

### SecurityServiceImpl

```
public SecurityServiceImpl()
```

## Methods

### autoLogin

```
public void autoLogin(java.lang.String username,
                      java.lang.String password)
```

---

### findLoggedInUsername

```
public java.lang.String findLoggedInUsername()
```

---

com.wlt.wla.auth.service

# Class UserDetailsServiceImpl

```
java.lang.Object
|
+--com.wlt.wla.auth.service.UserDetailsServiceImpl
```

## All Implemented Interfaces:

org.springframework.security.core.userdetails.UserDetailsService

---

< [Constructors](#) > < [Methods](#) >

---

```
public class UserDetailsServiceImpl
extends java.lang.Object
implements org.springframework.security.core.userdetails.UserDetailsService
```

## Constructors

### UserDetailsServiceImpl

```
public UserDetailsServiceImpl()
```

## Methods

### loadUserByUsername

```
public org.springframework.security.core.userdetails.UserDetails
loadUserByUsername(java.lang.String username)
```

---

com.wlt.wla.auth.service

# Interface UserService

---

< [Methods](#) >

---

```
public interface UserService
```

## Methods

## findByUsername

```
public User findByUsername(java.lang.String username)
```

---

## save

```
public void save(User user)
```

---

com.wlt.wla.auth.service

# Class UserServiceImpl

```
java.lang.Object
|
+--com.wlt.wla.auth.service.UserServiceImpl
```

All Implemented Interfaces:

[UserService](#)

---

< [Constructors](#) > < [Methods](#) >

---

```
public class UserServiceImpl
extends java.lang.Object
implements UserService
```

## Constructors

## UserServiceImpl

```
public UserServiceImpl()
```

## Methods

## findByUsername

```
public User findByUsername(java.lang.String username)
```

---

## save

```
public void save(User user)
```

# Package com.wlt.wla.auth.validator

## Class Summary

[InputValidator](#)

[UserValidator](#)

---

com.wlt.wla.auth.validator

## Class InputValidator

```
java.lang.Object
|
+--com.wlt.wla.auth.validator.InputValidator
```

### All Implemented Interfaces:

org.springframework.validation.Validator

---

< [Constructors](#) > < [Methods](#) >

---

```
public class InputValidator
extends java.lang.Object
implements org.springframework.validation.Validator
```

## Constructors

### InputValidator

```
public InputValidator()
```

## Methods

### supports

```
public boolean supports(java.lang.Class aClass)
```

---

### validate

```
public void validate(java.lang.Object o,
                    org.springframework.validation.Errors errors)
```

com.wlt.wla.auth.validator

# Class UserValidator

```
java.lang.Object
|

```

## All Implemented Interfaces:

org.springframework.validation.Validator

---

< [Constructors](#) > < [Methods](#) >

---

```
public class UserValidator
extends java.lang.Object
implements org.springframework.validation.Validator
```

## Constructors

### UserValidator

```
public UserValidator()
```

## Methods

### supports

```
public boolean supports(java.lang.Class aClass)
```

---

### validate

```
public void validate(java.lang.Object o,
                    org.springframework.validation.Errors errors)
```

# Package com.wlt.wla.auth.web

## Class Summary

[UserController](#)

com.wlt.wla.auth.web

## Class UserController

```
java.lang.Object
|
+--com.wlt.wla.auth.web.UserController
```

< [Constructors](#) > < [Methods](#) >

```
public class UserController
    extends java.lang.Object
```

## Constructors

### UserController

```
public UserController(javax.sql.DataSource dataSource)
```

## Methods

### add

```
public java.lang.String add(DBWishItems item,
                             org.springframework.validation.BindingResult
bindingResult)
```

### addCat

```
public java.lang.String addCat(DBCatItems cats)
```

## addCat

```
public java.lang.String addCat(org.springframework.ui.Model model,  
                                java.lang.String error,  
                                java.lang.String remove)
```

---

## admin

```
public java.lang.String admin(org.springframework.ui.Model model)
```

---

## archive

```
public java.lang.String archive(org.springframework.ui.Model model,  
                                java.lang.String error,  
                                java.lang.String remove)
```

---

## archiveItem

```
public java.lang.String archiveItem(DBWishItems item)
```

---

## balance

```
public java.lang.String balance(Balance balance,  
                                org.springframework.validation.BindingResult  
bindingResult)
```

---

## editCatList

```
public java.lang.String editCatList(org.springframework.ui.Model model)
```

---

## fulfill

```
public java.lang.String fulfill(DBWishItems item)
```

---

# login

```
public java.lang.String login(org.springframework.ui.Model model,
                             java.lang.String error,
                             java.lang.String logout)
```

## registration

```
public java.lang.String registration(User userForm,  
org.springframework.validation.BindingResult bindingResult)
```

## registration

```
public java.lang.String registration(org.springframework.ui.Model model)
```

## remove

```
public java.lang.String remove(org.springframework.ui.Model model,
                                java.lang.String error,
                                java.lang.String remove)
```

## removeltem

```
public java.lang.String removeItem(DBWishItems item)
```

## removeUser

```
public java.lang.String removeUser(User user)
```

## removeUser

[illegible]

## renameCat

```
public java.lang.String renameCat(DBCatItems cats)
```

---

## renameCat

```
public java.lang.String renameCat(org.springframework.ui.Model model,  
                                   java.lang.String error,  
                                   java.lang.String remove)
```

---

## restore

```
public java.lang.String restore(org.springframework.ui.Model model,  
                                 java.lang.String error,  
                                 java.lang.String remove)
```

---

## restoreItem

```
public java.lang.String restoreItem(DBWishItems item)
```

---

## setPwd

```
public java.lang.String setPwd(User user)
```

---

## setPwd

```
public java.lang.String setPwd(org.springframework.ui.Model model,  
                                 java.lang.String error,  
                                 java.lang.String remove)
```

---

## updateItem

```
public java.lang.String updateItem(javax.servlet.http.HttpServletRequest  
request)
```

---

## updatePrice

```
public java.lang.String updatePrice(DBWishItems item,  
org.springframework.validation.BindingResult bindingResult)
```

---

## updatePrice

```
public java.lang.String updatePrice(org.springframework.ui.Model model,  
                                     java.lang.String error,  
                                     java.lang.String remove)
```

---

## userList

```
public java.lang.String userList(org.springframework.ui.Model model)
```

---

## welcome

```
public java.lang.String welcome(org.springframework.ui.Model model)
```

com.wlt.wla.data

# Class WishListDaoImpl

```
java.lang.Object
|
+--com.wlt.wla.data.WishListDaoImpl
```

All Implemented Interfaces:

[WishListDao](#)

---

< [Constructors](#) > < [Methods](#) >

---

```
public class WishListDaoImpl
extends java.lang.Object
implements WishListDao
```

## Constructors

### WishListDaoImpl

```
public WishListDaoImpl(javax.sql.DataSource dataSource)
```

## Methods

### CatEmp

```
public java.util.List CatEmp()
```

---

### PriorEmp

```
public java.util.List PriorEmp()
```

---

### UlistEmp

```
public java.util.List UlistEmp(int limit,
                                int offset)
```

---

# WlistArchiveEmp

```
public java.util.List WlistArchiveEmp(int limit,
                                         int offset)
```

# WlistEmp

```
public java.util.List WlistEmp()
```

# WlistEmp

```
public java.util.List WlistEmp(int limit,
                                int offset)
```

# WlistEmp

```
public java.util.List WlistEmp(int limit,
                                int offset,
                                java.lang.String category)
```

## WlistEmpSize

```
public int WlistEmpSize()
```

## WlistEmpSize

```
public int WlistEmpSize(java.lang.String category)
```

## WlistRestoreEmp

```
public java.util.List WlistRestoreEmp(int limit,
                                         int offset)
```
